Adapter for EVO 9 Pro front hub

4 in 1 System

How to do: Take off the 20mm side cap so you got the press ring which holds the 20mm cap separately. Now take the basic adapter instead of the 20mm side cap. The press rings have to be replaced and pressed into the gap. The press ring fixes the basic adapter. Then plug in the adapter (5mm or 9mm or 15mm).

From now on you can change the adapter within a minute.

3 in 1 System

All EVO-9 Pro rear hubs 135/12mm can be used direct as 12mm or 10mm thru axle hub. Including the new developed standard quick release thru axle 12mm reduced to 10mm. So you can use this hub in every standard MTB. A optional axle set allows you to change the hub to the new 142/12mm standard.

135/12mm + 135/10mm + 142/12mm + 150/12 + 157/12 is possibly

With the Reverse 157/12mm axle you can modify your standard 150/12mm hub to the new standard 157/12mm.
